FDDI
(CDDI)

- High speed network interface:
  100 Mb/s
- Uses 4B/5B coding
  - Maps each 4 bits of data into a
    5 bit pattern for transmission,e.g.
    1111 --> 11101
  - Line rate is 125 M symbols/s
- Priority operation is the simular to the token bus scheme

FDDI
(CDDI)

- Multiple token operation
