7.8 Mapping of Digitally Modulated Waveforms onto Constellations of Signal Points 299
7.9 Theme Examples 302 [OFDM & LTE] and lecture notes Fading & OFDM Implementation Details

Chapter 9 Noise in Analog Communications 364
9.1 Noise in Communication Systems 365
9.2 Signal-to-Noise Ratios & Processing Gain 366
9.3 Band-Pass Receiver Structures 369
9.4 Noise in Linear Receivers Using Coherent Detection 370
9.5 Noise in AM Receivers Using Envelope Detection 373
9.6 Noise in SSB Receivers 377
9.7 Detection of Frequency Modulation (FM) 380
9.8 FM Pre-emphasis and De-emphasis 387

Chapter 10 Noise in Digital Communications 394
10.1 Bit Error Rate 395
10.2 Detection of a Single Pulse in Noise 396
10.3 Optimum Detection of Binary PAM in Noise 399
10.4 Optimum Detection of BPSK 405
10.5 Detection of QPSK and QAM in Noise 408
10.6 Optimum Detection of Binary FSK 414
10.8 Summary of Digital Performance 418

Chapter 11 System and Noise Calculations 437
11.1 Electrical Noise 438
11.2 Noise Figure 442
11.3 Equivalent Noise Temperature 443
11.4 Cascade Connection of Two-Port Networks 445
11.5 Free-Space Link Calculations 446
   - Link Budgets
   - Antenna Gain
   - Path loss
