Special Problem 2- 4.3

Using directly the results for dot product and cross product, show that the **triple product** can be expressed in terms of the scalar components of three vectors \mathbf{A} , \mathbf{B} , and \mathbf{C} as:

$$\mathbf{A} \cdot \mathbf{B} \times \mathbf{C} = \left(A_{x} B_{y} C_{z} + A_{y} B_{z} C_{x} + A_{z} B_{x} C_{y} \right) - \left(A_{x} B_{z} C_{y} + A_{y} B_{x} C_{z} + A_{z} B_{y} C_{x} \right)$$
