

Special Problem 3.C-4

A mixer has power of +13 dBm flowing into port 1, -30 dBm flowing out of port 2, and -25 dBm flowing into port 3.

- a) Which port (1, 2, or 3) is most likely the **RF** port ?
- b) Which port is most likely the **LO** port ?
- c) What is the **conversion loss** of this mixer ?
